PROFESSIONAL SUMMARY

DevOps Engineer with 5 years of experience building, securing, and managing production infrastructure on AWS and Azure. Skilled in Kubernetes (EKS), CI/CD using GitHub Actions and Jenkins, Terraform, and DevSecOps practices. Experienced in automating deployments, improving infrastructure security, reducing cloud costs, and managing multi-project, multi-region environments. Focused on building reliable infrastructure and tools that help teams release faster and more efficiently. Open to remote opportunities.

TECHNICAL SKILLS

Cloud Platforms: AWS, Microsoft Azure

CI/CD & Automation: GitHub Actions, Jenkins, Azure DevOps Pipelines, GitLab CI, GitOps

Infrastructure as Code: Terraform, Ansible, Helm

Containerization & Orchestration: Docker, Kubernetes (EKS), Docker Compose

Scripting & OS: Bash, Python, PowerShell, Linux

Monitoring & Observability: Prometheus, Grafana, Datadog, New Relic, Nginx Amplify

Security & Code Quality: SonarQube, Trivy, OWASP Dependency Check, FindBugs, Fail2Ban

Web Servers: Nginx, Apache, IIS

Databases: PostgreSQL, MySQL, MongoDB

Collaboration & Agile: Jira, Confluence, Azure Boards, Microsoft Teams

Version Control: Git, GitHub, GitLab

PROFESSIONAL EXPERIENCE

DevOps Engineer III | Robendevs Co. | Dhaka, Bangladesh, December 2023 – Present

- Built and hardened GitHub Actions CI/CD pipelines with branch-pattern-triggered deployments (release/v*) directly to production EKS clusters, significantly reducing release lead time and eliminating manual deployment steps.
- Automated AWS and multi-cloud infrastructure provisioning using Terraform (IaC), accelerating environment setup, ensuring consistent state across environments, and eliminating infrastructure drift.
- Ensured high availability and scalability of containerised microservices on Linux hosts using Docker and Kubernetes (EKS), supporting zero-downtime deployments and GitOps-driven release workflows.
- Designed a centralised, multi-repo Trivy vulnerability scanning architecture with auto-fix jobs, S3 report archiving, and Slack/Discord alerting—catching CRITICAL/HIGH CVEs before merge and meeting DevSecOps compliance gates.
- Implemented proactive Prometheus + Grafana observability stacks with SLO-aligned alert rules, reducing mean time to detection (MTTD) and mean time to recovery (MTTR) for infrastructure incidents.
- Drove FinOps cost optimisation across AWS environments through EC2 right-sizing, Spot instance adoption, EKS HPA tuning, and S3 lifecycle policies—delivering significant monthly infrastructure savings.
- Hardened internet-facing nginx environments on Linux against automated scanner traffic using allowlist-based routing, rate limiting, User-Agent filtering, and Fail2ban—while preserving internal service and cron access.

- Designed and deployed highly available, scalable AWS infrastructure leveraging EC2, S3, RDS, VPC, ELB, and Auto Scaling Groups (ASGs) to support production workloads with least-privilege IAM and zero-trust network segmentation.
- Configured Azure cloud infrastructure using App Service, Application Gateway, and Azure Database for PostgreSQL, applying SSL enforcement and role-based access controls for enterprise applications.
- Installed, configured, and managed comprehensive monitoring solutions, including Prometheus + Grafana and New Relic, providing real-time SLI/SLO visibility across resource and network layers.
- Developed Bash and PowerShell automation scripts that eliminated repetitive manual tasks, improving team efficiency, reducing deployment time, and enabling repeatable operational runbooks.
- Collaborated cross-functionally with development and QA teams in Agile sprints to ensure smooth deployments, fast incident resolution, and continuous improvement of delivery processes.

KEY PROJECTS

Fintech SaaS Platform — Multi-Region AWS & DevSecOps

- Own end-to-end AWS infrastructure for a multi-tenant fintech SaaS platform spanning payments, e-commerce, and banking-adjacent workloads, deployed across Singapore and UAE regions
- Support a client-facing UAT environment for a bank partner integration, resolving nginx/CORS/SSL issues on a DMZ proxy under tight turnaround
- Built a centralized security scanning pipeline (Trivy + GitHub Actions) across multiple repositories, including a Next.js/FastAPI monorepo, with automated remediation and reporting
- Diagnosed and resolved production incidents spanning Kubernetes, PostgreSQL SSL/TLS configuration, and Docker Compose service orchestration, restoring service with minimal downtime

TrueBeep – AWS Architecture (EKS)

- Architected and deployed a production-grade three-tier architecture on AWS, utilizing EC2, RDS, VPC, and EKS for optimal performance, security, and fault tolerance.
- Configured auto-scaling groups and load balancers to dynamically handle high-traffic spikes, significantly reducing downtime and improving application availability.

Robi Vehicle Tracker – Support & Infrastructure Maintenance

- Monitored server health and performance for a real-time vehicle tracking system serving Robi (a major telecom), ensuring continuous availability and swift incident response.
- Conducted root cause analysis (RCA) on infrastructure incidents and implemented corrective actions to improve system uptime and reduce recurrence.

EDUCATION

Bachelor of Science in Computer Science & Engineering, Nov 2015 – Feb 2020

Ahsanullah University of Science & Technology, Dhaka, Bangladesh

Thesis: [Early Depression Detection from Social Networks Using Deep Learning Techniques](#)
