[linkedin.com/in/rimon-shil](https://www.linkedin.com/in/rimon-shil) • Dhaka, Bangladesh

PROFESSIONAL SUMMARY

DevOps Engineer with 4+ years of experience designing, securing, and scaling production infrastructure on AWS and Azure. Specializes in Kubernetes (EKS) orchestration, CI/CD automation with GitHub Actions and Jenkins, and DevSecOps practices including automated vulnerability scanning and incident response. Proven record of reducing infrastructure costs, hardening client-facing environments against active threats, and building self-service tooling that improves release velocity across multi-project, multi-region deployments.

TECHNICAL SKILLS

Cloud Platforms: AWS, Microsoft Azure

CI/CD & Automation: GitHub Actions, Jenkins, Azure DevOps Pipelines, GitLab CI

Infrastructure as Code: Terraform, Ansible

Containerization & Orchestration: Docker, Kubernetes (EKS)

Scripting: Bash, Python, PowerShell

Monitoring & Observability: Prometheus, Grafana, Datadog, New Relic, Nginx Amplify

Security & Code Quality: SonarQube, Trivy, OWASP Dependency Check, FindBugs, Fail2Ban

Web Servers: Nginx, Apache, IIS

Databases: PostgreSQL, MySQL, MongoDB

Collaboration & Agile: Jira, Confluence, Azure Boards, Microsoft Teams

Version Control: Git, GitHub, GitLab

PROFESSIONAL EXPERIENCE

DevOps Engineer III | Robendevs Corp. | Dhaka, Bangladesh December 2023 – Present

- Built and hardened GitHub Actions CI/CD pipelines with branch-pattern-triggered deployments (release/v*) directly to production EKS clusters, reducing release lead time and manual deployment steps.
- Automated infrastructure provisioning using Terraform (IaC), accelerating environment setup and reducing human error across multi-environment deployments.
- Ensured high availability and scalability of containerized microservices using Docker and Kubernetes (EKS), supporting zero-downtime deployments.
- Designed a centralized, multi-repo Trivy vulnerability scanning architecture with auto-fix jobs, S3 report archiving, and Slack/Discord alerting, catching CRITICAL/HIGH findings before merge.
- Implemented proactive monitoring and alerting stacks using Prometheus and Grafana, reducing mean time to detection (MTTD) for infrastructure incidents.
- Established centralized logging, metrics collection, and observability dashboards across multi-cloud environments for real-time system health visibility.
- Hardened internet-facing nginx environments against automated vulnerability scanner traffic using allowlist-based routing, rate limiting, User-Agent filtering, and Fail2ban — while preserving internal service and cron access.

DevOps Engineer II | Bondstein Technologies Limited | Dhaka, Bangladesh *September 2021 – November 2023*

- Designed and deployed highly available, scalable AWS infrastructure leveraging EC2, S3, RDS, VPC, ELB, and Auto Scaling Groups to support production workloads.
- Configured Azure cloud infrastructure using App Service, Application Gateway, and Azure Database for PostgreSQL for enterprise applications.
- Installed, configured, and managed comprehensive monitoring solutions, including Prometheus + Grafana and New Relic, for real-time resource and network monitoring.
- Developed PowerShell automation scripts that eliminated repetitive manual tasks, improving team efficiency and reducing deployment time.
- Collaborated cross-functionally with development and QA teams to ensure smooth deployments, fast incident resolution, and continuous improvement of delivery processes.

KEY PROJECTS

Fintech SaaS Platform — Multi-Region AWS & DevSecOps

- Own end-to-end AWS infrastructure for a multi-tenant fintech SaaS platform spanning payments, e-commerce, and banking-adjacent workloads, deployed across Singapore and UAE regions
- Support a client-facing UAT environment for a bank partner integration, resolving nginx/CORS/SSL issues on a DMZ proxy under tight turnaround
- Built a centralized security scanning pipeline (Trivy + GitHub Actions) across multiple repositories, including a Next.js/FastAPI monorepo, with automated remediation and reporting
- Diagnosed and resolved production incidents spanning Kubernetes, PostgreSQL SSL/TLS configuration, and Docker Compose service orchestration, restoring service with minimal downtime

TrueBeep – AWS Architecture (EKS)

- Architected and deployed a production-grade three-tier architecture on AWS, utilizing EC2, RDS, VPC, and EKS for optimal performance, security, and fault tolerance.
- Configured auto-scaling groups and load balancers to dynamically handle high-traffic spikes, significantly reducing downtime and improving application availability.

Robi Vehicle Tracker – Support & Infrastructure Maintenance

- Monitored server health and performance for a real-time vehicle tracking system serving Robi (a major telecom), ensuring continuous availability and swift incident response.
- Conducted root cause analysis (RCA) on infrastructure incidents and implemented corrective actions to improve system uptime and reduce recurrence.

EDUCATION

Bachelor of Science in Computer Science & Engineering *Nov 2015 – Feb 2020*

Ahsanullah University of Science & Technology, Dhaka, Bangladesh

Thesis: [Early Depression Detection from Social Networks Using Deep Learning Techniques](#)
